

Two-Way Radio Adapters

Components that are used in two-way radio applications take quite a beating. Ensure that your components will stand up to the strain of day-to-day use in your client's, or your own, mobile two-way radio set-up with this line of adapters from TCC.

Your setup demands quality! A mobile two-way radio system is a big investment for you or your client, and setting it up is the most important step in the implementation process. The parts that you use in a mobile type environment will be subject to a lot of stress, bumping, and jarring; because of this you need to ensure that you use only the sturdiest and well made parts available to avoid costly problems down the line.

13-EP450-TGN

See bottom table for list of known supported radios

13-9756A-TGN

See bottom table for list of known supported radios

13-SP50-TGN
