

Cost Savings and Better Performance is possible with

TCC Custom Design Services

Whether you're a small or large business, if you have a concept for a unique RF product or need a custom RF component to integrate into your product, get an edge with TCC design and production services.

Why use workarounds in order to integrate a standard product or component into your product or design? Get a custom component that integrates seamlessly. Components designed specifically for your application are almost guaranteed to have better performance and pay for themselves many times over in saved production and/or assembly costs.

So, why choose TCC?

- For over 20 years, we at TCC have guided our customers through the process of making their products and RF components a reality.
- From concept through production our professional engineering team assists in assessing your application's needs and designing solutions that meet your exacting specifications.
- We have the ability to support numerous design platforms such as AutoCAD and SolidWorks to ensure that we work in the medium that's most comfortable to you and your business.
- We can provide low cost engineering samples for testing.
- And, when it comes time for production, TCC offers ISO9002 certified manufacturing facilities in Taiwan and China that are strictly monitored ensuring that your high standards are met at an affordable price.
- With our experience and capabilities TCC can offer you complete turnkey solutions which can greatly speed up your time-to-market response!
